

Selenium Grid Configurations

8/27/15 5:23 PM

Step 1:

Download the selenium server from <http://docs.seleniumhq.org/download/>
Put it on Hub and all Nodes

Step 2:

Go to hub. Using the command prompt, navigate to the directory Selenium Server jar is placed.

Run selenium server using this command

`java -jar selenium-server-standalone-2.47.1.jar -role hub`

Name of the jar files varies on version 2.47.1 is not always true

Step 3:

Go to all nodes. Using the command prompt, navigate to the directory Selenium Server jar is placed.

Run selenium server using this command

`java -jar selenium-server-standalone-2.47.1.jar -role webdriver -hub http://<hostname/ip of hub>:4444/grid/register -port 5555`

Advance command for specific instance

`java -jar selenium-server-standalone-2.47.1.jar -role node -hub <hub hostname>/grid/register -browser "browserName=internet explorer,version=11,maxinstance=1, platform=WINDOWS" -port 5656`
